Re: Position Statement of the Lake
Davis Task Force Steering Committee

Dear Secretary Chrisman:

Public Health and economic impact to the community of Portola and the surrounding area are a high priority for the Lake Davis Task Force Steering Committee (Steering Committee). We recognize the impact the northern pike could have on the State of California, including its multimillion-dollar salmon industry and water operations. We would encourage the California Department of Fish and Game (Department) to expeditiously move forward in researching the alternatives to rid Lake Davis of northern pike. This would include a comprehensive Environmental Impact Report that thoroughly addresses the Economic Impact any proposed project has on Portola and the surrounding area as well as the financial impacts to the area of the Sacramento - San Joaquin Delta. We ask that this study be undertaken with the full cooperation of the California Department of Health Services, Department of Water Resources, other related State Agencies and the affected agencies within the United States Government, including the US Forest Service.

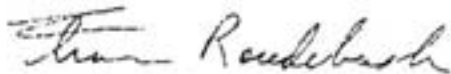

Therefore, the Steering Committee encourages the Department to move forward to carefully examine and evaluate all possible alternatives in

dealing with the presence of northern pike in Lake Davis and the surrounding tributaries. The Steering Committee encourages all parties concerned to continue working together to determine which alternative will best meet all concerns and be effective in alleviating the northern pike issue at Lake Davis. When the best information available has been thoroughly evaluated by all parties, the Department, in as timely a manner as possible, must make a decision regarding the direction in which the Department will proceed.

The Steering Committee also asks that the Department recognize and adequately address and mitigate any public health and safety issues, and economic impacts to the community, which may arise from any proposed project.

The Lake Davis Steering Committee continues to look forward to working with the many professionals assigned to this project and remains available to act as a project conduit between your Department and the local community.

Sincerely;

Fran Roudebush

Chair, Lake Davis Steering Committee

APPENDIX C

January 12, 2004

Ms. Fran Roudebush, Chair
 Lake Davis Steering Committee
 697 Ridge Street
 Portola, CA 96122

Dear Ms. Roudebush:

Thank you for your letter dated December 5, 2003, concerning the Position Statement of the Lake Davis Task Force Steering Committee. Because of the threat posed by northern pike to the fishery resources of Lake Davis, surrounding waters and Sacramento-San Joaquin River system, it is imperative that the California Department of Fish and Game (Department) determine and implement a safe and effective way to rid them from the state. As you know, the Department is currently compiling information on the most promising alternatives to dealing with this threat. The Department would like to use this information in consulting with all interested parties and the general community to develop a project proposal later this year. Yet this effort cannot be undertaken by one agency alone. The Department must act in close cooperation with such local entities as the City of Portola and the County of Plumas. Moreover, any final decision on a project must be made with the support of the California Departments of Health Services and Water Resources, the State and Regional Water Resources Control Boards, and the United States Forest and Fish and Wildlife Services.

Protecting public health is a critical consideration as the Department develops and implements any project alternative. To this end, I am directing the Department to continue working with the Steering Committee and the California Department of Health Services and Plumas County Environmental Health Department personnel in the ongoing analysis of alternatives. The potential economic repercussions to the local community, as well as the state as a whole, must also be recognized. I believe that an analysis of the short- and long-term economic costs and benefits should be undertaken as part of this collaborative decision making. Therefore, the Department should, in addition to carrying out the normal scope of any required environmental analysis, work with the local community, as well as other agencies or stakeholders with interest or expertise, to develop a framework for such an economic analysis. With the current budget crisis, it will take all of us working together to obtain and engage the resources needed for this effort.

1416 Ninth Street, Suite 1311, Sacramento, CA 95814 Ph. 916.653.5656 Fax 916.653.8102 <http://resources.ca.gov>

I appreciate the hard work done by the Steering Committee over the past four years on resolving the northern pike issue at Lake Davis. I would like the Department to continue working with the Steering Committee to provide accurate and timely information on this issue to all parties concerned. By working together, I am confident that a sound and safe decision can be made to effectively deal with the northern pike.

Sincerely,

A handwritten signature in cursive script that reads "Mike Chrisman".
